

2. Market Lens

Market Lens reads market structure on 27 markets (forex, rand pairs, gold, silver, oil, indices, Bitcoin, Ethereum) and draws it for you, refreshed every 15 minutes. It is built for swing and intraday structure, not M1/M5 scalping.

1 Open Market Lens

Go to gettraderadar.com/lens. The left column is the "Top 5 to watch" (clearest structure right now, 0-100 score). The chart shows the selected market; the right column is the plain-English read with both scenarios.

Market Lens on desktop (Pro view).

2 Read the zones

Green boxes are demand zones and red boxes supply zones (order blocks), with fair value gaps, liquidity (equal highs and lows), BOS / CHoCH labels, premium / discount and key levels (previous day and week high / low, week open). "How to read this" at the top explains every drawing.

3 Switch timeframe: H1, H4, D1, W1

Use the H1 / H4 / D1 / W1 buttons above the chart. Read top-down: W1 → D1 → H4 for the bias, H1 for the zone. There are no M1 / M5 charts; lower-timeframe traders use Lens as their higher-timeframe map.

4 Switch market

Tap the market name on the chart to open the switcher with all 27 markets and a search box. Locked markets show how to unlock them (Free: 1 extra unlock a day when signed in; Pro: every market).

The in-chart market switcher.

5 Top-down: higher timeframes first

Every read starts with the higher-timeframe (HTF) bias: weekly, daily and 4-hour structure combined (W1 counts once, D1 and H4 twice). It is Bullish or Bearish when they clearly agree, and Mixed when they disagree or are weak. The 1-hour is then the timing inside that picture. Each setup, zone and Trade this idea is labelled: "With the trend" (it points the same way as the higher timeframes), "Counter-trend — against W1/D1/H4 (pullback idea only)" (shown faint, in amber) or "Wait — higher timeframes disagree" (HTF Mixed). Demand zones are highlighted in a bullish HTF and supply zones in a bearish HTF; the other side is drawn faint. The market list ranks aligned clarity first. Alerts, phone pushes and emails only fire for with-trend setups, never counter-trend. One-click orders (Trade this, the Trade Panel buttons) are off for counter-trend setups unless you turn on "Allow counter-trend setups" in Settings → Trading (off by default); the Trade planner starts on the HTF side and asks before you plan the other side. Honest note: this is about clarity and discipline, not a proven edge. In our test of 32,031 zone touches on all 27 markets (January 2024 to October 2026), zones held about as often against the higher timeframes (60%) as with them (58%). Past results do not guarantee future ones.

6 Dollar context (DXY)

The US Dollar Index (DXY) is one of the 27 markets: full structure on H1, H4, D1 and W1. It is analysis only, because most brokers (IC Markets included) do not offer a DXY CFD, so there is no "Trade this" or Send to MT5 on it. It is also used as context: on EURUSD, GBPUSD, AUDUSD, NZDUSD, USDJPY, USDCHF, USDCAD, USDZAR, gold and silver the read shows "Dollar context: DXY H4 bullish/bearish — supports/opposes this read". Pairs with USD second (EURUSD) and gold move against the dollar; pairs with USD first (USDJPY, USDZAR) move with it. What happens when the dollar opposes your trade is your choice in Settings → Trading ("When the dollar opposes"): Warn (default: an amber note, nothing else changes), Half risk (Trade this, the Trade planner and the Trade Panel size at half your risk %) or Block (TradeRadar will not place it). Warn is the default because of our own test: across 12,063 zone touches on these 10 markets (June 2024 to October 2026), zones held 60% of the time with the dollar opposed and 58% with it on side. That gap is small and inconsistent, so the dollar is context, not a filter. Past results do not guarantee future ones.

7 Pick a chart type

The chart-type menu on the chart toolbar switches between Candles, Heikin Ashi, Bars, Line and Area. Candles are the default.

8 Turn on alerts

Under the chart, "Live alerts" lists zone reached, new top market and structure flips. Turn on desktop alerts there, or phone alerts in Settings → Connections. Lens Alerts are part of Pro; they pause while markets are closed.

Live alerts on Market Lens.

9 On your phone

The same page works on a phone: the top market first, then the chart and the read.

Market Lens on a phone (signed out: today's #1 market is free).
